Dear Hiring Team,

I'm writing to apply for the Mechatronics Engineering Intern position at Example Robotics Co. As a mechatronics engineering student with hands-on experience across embedded systems, PCB design, and control theory, I'm excited about the opportunity to contribute to your automation team.

In my most recent project, I designed and tuned a PID-controlled line-following robot, improving lap times by 38% over a fixed-gain baseline — the kind of iterative, measurement-driven engineering I'd bring to your team. I've also led a two-person hardware team building a stackable PCB sensor system, and derived closed-form inverse kinematics for a 3-DOF robotic arm.

I'd welcome the chance to talk about how my background fits your team's needs. Thank you for your time and consideration.

Sincerely,

James Smith
