

# Your Name

Mechatronics Engineering Student

Toronto, ON | you@example.com | +1 (555) 555-5555 | [GitHub](#) | [LinkedIn](#)

## Education

|                                                   |                     |
|---------------------------------------------------|---------------------|
| <b>Program Name</b> , University Name             | Expected Month Year |
| Relevant coursework: Course A, Course B, Course C |                     |

## Technical Skills

**Languages:** C, C++, Python, MATLAB  
**Tools:** SolidWorks, KiCad, Git, ROS  
**Areas:** Embedded systems, control theory, PCB design, CAD

## Experience

|                                                                                                                                                                                                                         |                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Mechatronics Intern</b> , Example Robotics Co.                                                                                                                                                                       | May 2025 – Aug 2025 |
| <ul style="list-style-type: none"><li>Designed and validated a vision-guided pick-and-place fixture, cutting cycle time by 12%.</li><li>Reduced manual changeover steps from 6 to 2 through fixture redesign.</li></ul> |                     |

## Projects

|                                                                                                                                                                                                                                     |                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Autonomous Line-Following Robot</b>                                                                                                                                                                                              | Jan 2026 – Mar 2026 |
| <ul style="list-style-type: none"><li>Designed a PID-controlled line-following robot with gain scheduling, improving lap times 38%.</li><li>Fabricated and populated a custom PCB for the sensor array and motor drivers.</li></ul> |                     |
| <b>3-DOF Desktop Robotic Arm</b>                                                                                                                                                                                                    | Sep 2025 – Dec 2025 |
| <ul style="list-style-type: none"><li>Derived closed-form inverse kinematics for a 3-link planar arm.</li><li>Iterated a compliant 3D-printed gripper jaw through four print revisions.</li></ul>                                   |                     |

## Leadership & Activities

|                                                                                                                        |                    |
|------------------------------------------------------------------------------------------------------------------------|--------------------|
| <b>Formula SAE — Electronics Lead</b>                                                                                  | Sep 2025 – Present |
| <ul style="list-style-type: none"><li>Lead a 4-person subteam designing the car's CAN bus telemetry network.</li></ul> |                    |
